Laura studied A levels in French, history and politics. Then, she went to university to study politics and French because these were her favourite subjects. At university, she had the chance to live in France and work in a primary school. Laura decided that, after she graduated, she would enjoy being a teacher so trained while working in school. She completed her training after one year and is now a primary school teacher.

Liam studied A levels at a sixth form college in maths, accounting and physics. He always knew that he wanted to be an accountant, like his uncle. He thought about going to university but was worried about having a student loan and getting into debt. He decided to do a four-year apprenticeship with an accounting firm so that he could earn money while he was learning. He also thought an apprenticeship would give him more practical experience. He is now a qualified accountant, working for a big firm in a city.

After completing her GCSEs, Sam knew that she wanted to be an electrician. She started an apprenticeship at her local college to complete a Level 3 Diploma in Electrotechnical Services. After two years, she was fully qualified and started working as an electrician for a small business. She hopes to own her own business in the future.

Jamie enjoyed science at school and knew that he wanted to do a job which helped people. After studying biology, maths and physics at A level, he studied adult nursing at university. After 3 years, he qualified with a Nursing Degree. When he qualified, he started working at a hospital but now works at a local doctor's practice as a community nurse because he enjoys building relationships with people in his local community.
